## Soy Bean To Be Used More For Food Purposes

The soy bean—better known perhaps as the soy bean—has been used throughout Asia for thousands of years as a staple diet, has been made into food for European consumption.

For centuries the soy bean has been known by the Western world, but was disregarded by scientists and dietitians as food for human consumption because of its seemingly ineradicable unpleasant taste and smell. Now an Italian scientist, Dr. Michele Bonetto, claims to have perfected a method of entirely eliminating the smell and taste, and the bean and its by-products can be used for dozens of kinds of food and drink.

Bread, cakes, pastry, break fast and infant foods, and special dishes for diabetics, are all being manufactured from the bean in the United States. The soy bean is to show a new diet to the world. Better bread cakes, breakfast foods, baby foods, and milk than have ever been known, can be made from it says Captain W. J. Mason, managing director of the Soya Products, Inc., of Evansville, Indiana.

"The beauty of it is that it can be grown anywhere and harvested at any time and in any weather.

"Four crops a year can be garnered from the first planting. It does not need care. Saving Life."—Dr. McCollum, of the Johns Hopkins Institute, says that the bean is almost unique in its vitamin content.

"He insists that if we were to temper our diet with soy bean flour there would be a drop of at least 20 per cent. per year in the mortality rate, and an annual saving of hundreds of

## Brost-Kowitch

A quiet wedding was solemnized at the United Church Monday, on Tuesday, October 16th, at 12 noon, when Miss Annie Kowitch, of Lancer, Sask., was married to Roy Brost, of Lancer, Sask. Mr. Bill Brost and Miss Lena Brost, acted as groomsmen and bridesmaids. Rev. A. J. Law, pastor of the United Church, performed the ceremony.

## Deer Lock Antlers in the Cypress Hills

The following interesting item is from the Maple Creek News: "While driving a wagon through the O'Hara ranch in the Cypress Hills on Saturday morning 'Cuppy' Dyer came across two White Tail deer with their horns locked. The two bucks were beautiful specimens and in the pink of condition. They paid scant attention to their human audience even when Mr. Dyer tried several times to see if they would break apart.

Returning an hour later, Mr. Dyer saw the deer, still locked, but a mile distant from where he had first seen them. On this occasion 'Cuppy' threw a rope on one of the bucks and edged in to see what he could do in the way of unlocking their antlers. After sizing the situation up, he succeeded in doing so, the larger of the two bucks bounding rapidly away. The smaller one, over which the rope had been thrown, appeared to be in a state of collapse, and died an hour later.

thousands of useful lives."

A list of things which may be produced from soy bean, includes:  
Biscuits  
Butter and lard  
Cakes  
Fertilizer  
Flour  
Lighting equipment  
Celluloid substitute  
Glycerine  
Waxing ink  
Paper size  
(From the Sunday Express, London, England.)

## Registration of Electors Lists Are Being Prepared

Registration of electors under the Dominion Franchise Act, commenced all over the Dominion on October 15, preliminary lists will be completed by October 23.

Under this new system enumerators will make up the preliminary lists which will be posted up in their offices for examination by voters. On November 13, 14 and 15, at certain hours, all concerned may appear before the enumerator for the purpose of having corrections, alterations and additions made in the lists. On the expiration of the last date, lists will be closed, and any decision of the enumerator will be subject to an appeal to a judge.

Should a Dominion election be called before May 15, 1935, the lists being prepared at present time will be the official voters' lists, and only those whose names are listed will be entitled to vote. Previously, new lists were prepared immediately an election was called. Citizens and party adherents should make it their concern to see that all proper names are on the lists. D. Lash is enumerator for this part of the district in the Medicine Hat constituency. There are 129 polling divisions in the riding.

## Free Courses in Agriculture For Students Over 16 Years

In an advertisement appearing in this paper last week, it was inaccurately announced that free courses in Agriculture and Home Economics would be given at the Olds and Vermilion Schools of Agriculture to boys and girls under sixteen years of age. Obviously this should have read OVER sixteen years of age.

A flow of natural gas has been struck in a well being drilled near Maple Creek, Sask. This is the second strike of importance in Saskatchewan. Recently pipe lines were laid in Lloydminster to supply the residents with gas, and it may be that Maple Creek and other neighboring towns and villages will have a "tough at the old ash pile."

## University of Alberta

Edmonton, Oct. 11.—University of Alberta Students' Union Executive governing body of all undergraduates organizations, held its first meeting of the current academic term here October 3rd. Members of the Executive are elected to office annually, following voting in which all students participate. Arthur Bierwagen, Calgary, 1934-35 president of the organization. Other members of the "cabinet" are Margaret Smith, Edmonton, vice-president; Jack McIntosh, Edmonton, secretary; and J. Tuck, Edmonton, treasurer.

The big Australia to England MacRobertson airplane race, starts Oct. 20. The distance is 11,233 miles and prizes amount to \$50,000. The fliers must check in at five control stations en route.

New York sees representatives of 300,000 women workers plan a campaign against attempts to restore women's home work—workers are alarmed at threat to return to strange, archaic times.

## French Government Stops Showing of Pictures of Assassinations at Marseilles

The French Government has put a ban on the all too graphic motion pictures of the assassination of King Alexander, of Yugoslavia at Marseilles. Paris police refuse to allow a theatre to give its advertised exhibition to a waiting audience, and postal authorities hold up reels of films to America.

Twelve hundred miners at Pox, Hungary, entered a small depot, to die in the coal mines unless their demands for more wages and working hours were granted. They were getting \$2 per day and about two days work a week. For 110 hours the men were underground and were reported in many cases to be in a critical condition of health when brought out—the owners having acceded to some of their demands. Conditions must have been very bad to drive that number of men into a pact of such nature.

## Early Break in Gold Bloc

Washington, Oct. 13.—An early break in the European gold bloc is expected here. Belgium it is considered cannot remain on gold much longer unless supported by loans from France or elsewhere. Holland is to a degree in the same boat.

## The Crop Season

The crop season has been one of the most unusual in several respects in the history of the province. At this date a large proportion of the threshing of wheat and other grains still remains to be done, due to the unusually prolonged spell of cold, wet weather projected into the middle of the harvesting operations on September 15th and lasting almost three weeks. During this period, snow and frost alternated with rains to tie up farm operations throughout the entire province. Threshing was resumed a week ago under more favorable weather conditions, over most of the province, but in the Peace River district rains have continued and very little has yet been done in the threshing of grain.

The crop season opened with an unusually early, warm, dry spring, followed by a period of rainy weather in which most parts of the province received a substantial amount of moisture, and prospects were for a good season. Once more, however, drought conditions prevailed in the south-eastern districts extending from the Coronation line of the C.P.R. south to the main line, and these conditions, with the ravages of grasshopper, took heavy toll of the growing crops. Southern districts of the province, comprising chiefly the Lethbridge division of the C.P.R. from the mouth of the Red River to the Saskatchewan border, continued to receive satisfactory rains and grain crops advanced to harvest under almost ideal conditions in most of the territory.

North of Calgary, from Olds north to as far as Ponoka, and eastward from the mountains across the central part of the province, unusually dry conditions prevailed following the month of June, and this territory has failed to produce to its normal extent this season. Not only have grain crops suffered from this condition in these districts, but production of feed, usually heavy there,

## St. Mary's Anglican Church

Sunday, Oct. 21st

Cappan, 11:00 a.m., Holy Communion.  
Emilie, 2 p.m., evensong and sermon.  
Gavendish 4:30 p.m., evensong and sermon.  
Empress, 7:30 p.m., evensong and sermon.  
Rev. J. S. Parks, Vicar-in-Charge.

has fallen below normal.

In the north central and northern parts of the province, the season was for the most part one of ideal growing conditions, with substantial precipitation throughout the season. The prospect in these districts until the middle of August was for almost bumper crops of all grains. On the 24th of August a blighting frost occurred over the territory from Athabasca south to Red Deer and from west of Edmonton to the eastern boundary of the province. This frost caught a fairly large proportion of wheat and most of the coarse grains uncut, and the damage to these was extensive, as it was to most of the crops in the territory off. This was the heaviest August frost experienced in this part of the province for many years. The chief damage done by the frost was in the loss of from two to three grades on wheat crops touched, and a very heavy loss on the yield and grade of coarse grains.

The Peace River district which experienced an ideal growing season and had in prospect the heaviest harvest in its history, and was not affected by the August frost.

The wheat harvesting season generally speaking opened somewhat earlier than usual, and cutting throughout the southern districts was completed at a comparatively early date, and was well under way in the central districts at the time of the August frost. By the week of September 10th, during which week snow fell over almost the entire province (cont. on back page)

## MORE THAN A GRAIN COMPANY

Every Alberta Pool elevator may be viewed as a sentinel guarding the interests of grain growers in that district.

It may also be looked upon as a link connecting various parts of a great farm movement.

It is an emblem of a determined effort on the part of the farming population whose objective is a greater measure of social justice and security for the men women and children engaged in Canada's basic industry.

## A New And Better Viewpoint

The recent annual convention of the Canadian Chambers of Commerce held at Winnipeg, Wis., is generally recognized, one of the most important and in many ways the most significant gathering yet held by that body. It was not only one of the largest assemblages of outstanding men in the financial, industrial and commercial life of the Dominion yet convened, but it appears to have been animated by a new spirit based upon a fuller recognition of the responsibilities of what has been termed Big Business to the country as a whole and to the masses of producers, workers and consumers who, in the last analysis, are the backbone of the nation.

Important resolutions dealing with far-reaching social and economic questions, and involving vital changes in national policies, were adopted, not the least significant of which was the declaration in favor of the recognition of a Reciprocity Agreement with the United States in matters of trade. The adoption of this resolution in itself reveals the change in sentiment and viewpoint of the business world of Canada.

Significant, too, were some of the addresses delivered by men occupying high executive positions in the industrial world. For example, Mr. T. A. Russell, president of the Massey-Harris Co., told the convention that "the success of industry and farming were wrapped up together in Canada in a way which nothing could separate," and he gave facts and figures to prove it. As the purchasing power of the farmer declined, said Mr. Russell, it did the demand and output for farm implements. In the case of the Massey-Harris Co., he said, employment dropped from 4,800 in 1928 to an average of less than 1,500 for the years 1932 and 1933. "Not only has this proved a hardship for the man thrown out of employment through no fault of their own," he said, "but it has tremendously affected their purchasing power, their ability to pay taxes and generally, to contribute their quota to Canadian prosperity. Likewise, the farmer who has no return on his investment has had to curtail his expenditures and has been a poor customer either for the farmer or for industry." Mr. Russell strongly urged the absolute necessity of complete and generous co-operation with the farming industry in order to bring about its re-establishment and promote its prosperity.

Then, up spoke Mr. W. R. Campbell, president of the Ford Motor Co. of Canada, on behalf of the workers in industry. Space does not admit of any extended quotations from Mr. Campbell's address, but he will suffice to indicate his position, and the attitude he urged all employers of labor to adopt in the interests of the workers, in their own interests, and in the interests of the country at large. Mr. Campbell said:

"As far as Canada is concerned there can be no normal times until all of our people who are capable of working have an opportunity for gainful employment—free and unfettered by government aid. In dealing with the ill which must be corrected it is time that the very grave importance of our human relationships be recognized. I repeat—until every man in this country capable of working is able to find gainful employment the prime responsibility of industry is not discharged. The employer's interest must not be subordinated to the interest of the shareholder."

"Perhaps," continued Mr. Campbell, "these are rather amazing statements, but not until this condition is brought about can either capital and management or the worker prosper. Our primary duty, then, should be to make certain not only that the interest of labor in the benefits of industry be not subordinated to that of capital, but also that labor be granted an equitable share of those benefits."

Suggesting the only possible way in which industry can be re-vitalized and employment provided, Mr. Campbell said: "What we must do is to start the ball rolling upward injecting more money into our economic structure at the bottom, through the wages of our industrial workers and profit by the steadily increasing circulation of this money upward through our whole business fabric. That is good business because it is profitable. Perhaps it means even the salvation of our industry itself as we know it today. Our problem at home, then, becomes one of finding greater markets for the products of domestic manufacture, and this again devolves upon the problem of finding greater employment and providing increased purchasing power for our own workers. The solution lies in increasing the average worker, by paying him a greater return for his labor and by increasing the volume of his employment, by pumping into our economic structure more money at this base, we can get a start toward solution of our problem."

Having made a reference to further development of export trade, Mr. Campbell concluded: "It is an inescapable fact that we have now entered upon an era of social readjustment in this world. In working out this readjustment so that the rights of both capital and labor shall be properly balanced, it devolves upon capital to take the initiative, with the welfare of the whole nation always in mind. Capital must do this, because capital has the imagination, the training and the ability to assume leadership. Until this proper balance is struck and until this country has been able to lift itself by its own courage and its own ability back to normal times, it is imperative that capital defer profits, defer its claim to a return upon invested wealth, in order to provide all of our people able to work with adequate employment at such a return as to enable them to live in accordance with standards commensurate with the calibre of Anglo-Saxon peoples."

Thus we have seen confession by two of Canada's great industries that their first responsibility to-day is not to shareholders and bondholders, but to farmers and workers—the real primary producers; that capital must wait for its return; may more, that it must take the leadership in solving the problems of the producers, workers and consumers, in full realization of the fact that unless and until these are solved, there can be no return and no future for industry or the enormous investments that have been made in industry. Such frank abated recognition of this great truth is, in itself, the first and a long step towards ultimate advancement and success for all.

Hint: "I hope you'll dance with me tonight."

Her: "Oh, certainly. I hope you don't think I came down here merely for pleasure."

Gas masks are sold throughout Italy.

## Change of Climate, Diet, Water Often the Cause of Diarrhoea

If you are suddenly attacked with Diarrhoea, Dysentery, Colic, Flatulence, Bloating, Complaint or any Loss of the Bowels, do not waste valuable time, but get a bottle of Dr. Rowley's Extract of Wild Strawberry and use it quickly it will relieve you.

For bowel complaint remedy has been on the market for the past 88 years. Proof enough that you are not experimenting with some new untried medicine.

Do not accept a substitute. Get "Dr. Rowley's" you are safe for it, and be on the safe side.

Put up only by The T. Milburn Co. Ltd., Toronto, Ont.

## Sately Wedding

Prince Of Wales Expected To Be Best Man At Marriage Of Prince George And Princess Marina

The world's best known bachelor, the Prince of Wales, is expected to be the best man at the sately wedding in Westminster Abbey of Prince George and Princess Marina of Greece. The date was announced as May 28.

Little Princess Elizabeth, niece of George, will be a bridesmaid. The date was chosen after long discussions at Balmoral castle, Scotland, in which the king and queen, the Prince of Wales, Prince and Princess Nicholas of Greece, the Archbishop of Canterbury and the betrothed couple themselves participated.

It was expected the service would be performed by the Archbishop of Canterbury and York. The great ceremony in the abbey will be followed by a short service according to the rites of the Greek Orthodox church, in a room in Buckingham palace.

Princess Marina will drive the bride in the abbey full state. Prince George will drive separately with the Prince of Wales, while Marina will be in a third procession with her parents.

## LOST 10 LBS. IN TWO MONTHS

Not too Old to Reduce at 50

Here is a letter which proves that there is nothing too old to reduce excessive fatness, even at the age of 50.

"I was becoming too fat after reaching 50, and had attacks of rheumatism and indigestion. I took ordinary salts and other medicines, but they did not do me any good. Then I commenced taking Kruschen. I soon began to feel better—brighter, stronger, had more energy, no rheumatism, and to my surprise, after two months, I lost 10 lbs. in weight, although I was eating much more, as digestion followed. I feel like a new man. The numerous vital salts in Kruschen stimulate and tune up all the functions from a number of different angles. Your stomach, liver, kidneys all feel the immediate benefit. Your blood is cleansed of impurities and becomes invigorated and fresh. You forget indigestion, rheumatism, and depression. You feel a new and unaccustomed feeling of physical and mental exhilaration."

## Vancouver Is Likened

To Constantinople

Should Greatly Aid Modern World

Vancouver, with its natural advantages and geographical position, should be to the modern world what Constantinople was to the ancient world, Lord Tormin of Ash, member of the judicial committee of the privy council, declared in an address to the Canadian Club at Vancouver.

Lord Tormin said that Vancouver with its marvelous harbor and a network of railways behind it, is the most lavishly interested in the solution of the world depression. Because, he said, Vancouver should logically aid Asia commercially in fact.

## Ancient Theba

Try To Germinate Seeds 2,500 Years Old

The question of whether wheat reputedly 2,500 years old will sprout was before scientists of the agriculture ministry, and Oxford and Cambridge Universities recently. The wheat seed was found in a tomb of an Egyptian king at ancient Thebes. Experts are attempting to produce germination by natural means, following which they intended to try artificial methods.

## How are Your Nerves?

Mr. R. Walden of the Toronto Star writes: "I have been suffering from nervousness for some time. I have tried many remedies, but nothing has helped me. I have heard of Dr. Rowley's Extract of Wild Strawberry and have decided to try it. I have just received it and am sure it will help me. I have heard of it for some time and have been very interested in it. I have heard of it for some time and have been very interested in it. I have heard of it for some time and have been very interested in it."

## System Not Sound

The Dominion department of agriculture announced that experienced have shown that the practice of toping turnips some weeks before the time of harvesting is not sound. Data obtained shows that the turnips from the untopped crops had the higher food value. The topped crop failed to grow after topping and was a lower yield per acre of nutriment.

More than 1,800 families have been recorded in British since 180 B.C. The famine of 1877-78 claimed 9,500,000 lives.

W. N. U. 2088

## WHAT DOES YOUR HANDWRITING REVEAL?

By LAWRENCE HIBBERT (Grapho-Analyst)

(All Rights Reserved)

(Editor's Note: The response to the author's invitation to readers to send in a specimen of their handwriting for a personal reading has been enormous. Readers are referred to the announcement at the foot of this article.)

"How can Grapho-Analyst help me?"—this is the question that readers invariably ask when they read my articles on the subject of character analysis from handwriting.

And it is a natural question. For in these days, perhaps more than any others, the struggle for existence, for progress is individualistic. I will endeavor to answer the question by first asking others.

Are you happy? or are you continually frowning at life, with a constant chip on your shoulder?

Are you progressing? or are you standing still, with a perpetual hesitating between your feet?

Do you make friends, and keep them?—or are you living the life of a hermit and your friends are few?

Do you make friends, and keep them?—or are you living the life of a hermit and your friends are few?

The answers to all these questions can be summed up in three words: Know yourself, and others. Or, one word will suffice—Understanding.

And understanding yourself—your own mind and character—your own strengths and weaknesses—you will be seriously handicapped.

And understanding others—your friends and enemies—will be seriously handicapped.

Grapho-Analyst helps you to know yourself, and thus enables you to make the most of your own life, whilst at the same time, by pointing out the weaknesses of others, you have an opportunity to eradicate them.

Handwriting is not merely a matter of putting pen to paper. It is a matter of putting your brain to work. And the brain is the seat of your life. Everything you do emanates from your brain.

And everything you are and can be is a reflection of your brain, as diagnosed by an expert grapho-analyst.

I have space for only a few very brief extracts from character readings made recently.

Mr. X. is not likely to be very impulsive. You do not consider very long before acting. There is a slight air of precaution shown—so you do not let your feelings run away with you.

Mr. Y. You have a great deal of pride and personal dignity, a retentive memory, and a keen insight into the details. You have a considerable regard for your own interests, and are prone to regard yourself as full of originality and individuality.

Mr. Z. You are a man of great pretension than actual, and is not entirely sincere. I suggest that you be more your natural self; your friends will like you all the more.

Do you want a personal reading of your handwriting? Do you wish to know what your friends are really thinking? Do you wish to know your writing, state birthday, sex, etc., and enclose 10c coin and 3 stamped address envelopes. I will send more than one specimen for analysis, please enclose coin for each. Replies will be mailed as quickly as possible, but please allow at least two weeks for reply. Address: Lawrence Hibbert, Grapho-Analyst, c/o Winnipeg Newspaper Union, 170 McDermott Ave. E., Winnipeg.

## Poor Opinion Of Women

Twelve-Year-Old Jackie Cooper Has Had Better Experience

Jackie Cooper, young motion picture actor, arrived in New York recently to fill a theatre engagement and said some bitter things about women.

"Women are just suckers for my money," he declared, and then declared himself for evil.

"I don't think I'll ever have anything to do with them," he said.

## Must Be Registered

After January 1, 1935, any person found to be in possession of a pistol or revolver when its ownership has not been recorded with the police authorities will be liable to a fine of \$50 or 30 days in jail, or both. In amendment to the Criminal Code was passed at the last session of parliament and it is being proclaimed in the Canada Gazette.

Motiator: "I want a chauffeur who can think quickly in an emergency."

Applicant: "That's me, sir! I never missed a car yet that I couldn't think up an A-1 excuse in five seconds."

The whale, in quest of food, goes down to the very depths of the ocean.

## The Motor Horn

Suppression of Noise In England During Hours Of Night

The city of London has tried an experiment in the suppression of noise with such success that the London rule is being extended to cover the whole of England. In London for some weeks past it has been an offence, punishable by a fine, to sound a motor horn between 11:30 at night and seven o'clock in the morning.

The celebrated English respect for law has again been in evidence. Motorists have agreed that a nightly cessation on honking is a good idea and have refrained from sounding klaxons and hooters in the prohibited hours. A blessed quietude has resulted. People have been surprised to find out how large an ingredient in London's night noises the motor horn was.

But a curious, incidental and unexpected result of the regulation is that London at night is safer now than it was. A motorist who knows that he may not, under penalty of time, warn the approaching pedestrian with a blast of sound is a more careful driver than he otherwise would be. The discovery of this fact suggests some reflections on the motor horn.

For few would possess the abolition. A motor car without sounding apparatus in good order cannot pass the safety tests. On the other hand, there are certainly too many motorists who think that the possession of an efficient horn gives them a license to take risks and scare pedestrians out of their wits. If drivers used their horns in emergency only and not as a routine method of clearing the streets, it is probable the streets would be safer.

They would be quieter too, of course. But the horn-blower who is the worst disturber of the peace is not the man who mikes pedestrians jump. He is the young person who summons a friend by prolonged hooting outside the friend's house. The suppression of this nuisance daily from midnight to midnight would be welcome.—Winnipeg Free Press.

The natives of Java sleep on more mats, while all about them flourish the kapok trees, which furnish the silky cotton for mattresses.

## Another Wheat Exporter

Report That France Has Joined The Ranks Of Exporters

The press report that France has left the ranks of wheat importing countries to join those of exporters is of considerable importance to Canada, in that still another competitor is added to the list. Prior to 1929, France did not produce sufficient wheat to meet her domestic requirements, except in years when exceptionally large crops were harvested.

Large crops were grown in that country in 1929, 1932, and again in 1933, so that a surplus of wheat has been built up. In pre-war years France produced very large crops. The 1880 crop amounted to 350 million bushels or equivalent to the production of 1932. In the five-year period from 1909 to 1913, production averaged 317 million bushels per annum. From 1929 to 1932 it was 250 million bushels or about 27 million bushels under the pre-war average. France has not reached her pre-war average of wheat which amounted to 16.5 million acres. The 1933 acreage was 15,538,000 and it has not changed materially since 1920.

## Policy To Be Continued

Renewal Of Stock Feeder System Has Been Announced

Hon. Robert Weir, Dominion minister of agriculture, has announced the renewal of the feeder purchase policy, which was in effect from 1924 to 1932. Under this policy the Dominion department of agriculture will pay one-way railway fare and reasonable travelling expenses to purchase feeder cattle to return to their farms for feeding. The object of this policy is to enable those farmers who have a surplus of feed to use it to advantage and at the same time provide an outlet for surplus Western cattle.

Tarish can be cleared from copper and brass by using buttermilk, says Cornell University's home economics department.

A Californian used only 13 words to will his \$10,000 estate to his wife.

Vary your menus with these tempting breads made with

FOR over 50 years Royal Yeast Cakes have been the standard of fine quality. Today, they are preferred in 7 out of every 8 Canadian homes where yeast is used in home baking. ## May Ask Investigation Into Operations Of The Winnipeg Grain Exchange

Winnipeg.—John I. McFarland, general manager of the Central Selling Agency of the Canadian Wheat Pools, disclosed he contemplated requesting federal authorities to investigate recent operations on the Winnipeg Grain Exchange.

Questioned about rumors he would seek an investigation into selling operations, Mr. McFarland stated definitely it was his intention to place the matter before proper authorities at Ottawa for their consideration.

Reports the investigation was being contemplated were made in a special dispatch to The Winnipeg Free Press from Ottawa. The dispatch, in part, said:

"An investigation into selling of wheat futures on the Winnipeg Grain Exchange in recent weeks is held probable in well-informed circles here. It is currently rumored that John I. McFarland, general manager, Canadian Wheat Pools, through whom government wheat operations have been conducted since 1929, is asking for a probe into the nature of selling operations on the Winnipeg exchange, which, it is understood, has greatly exceeded in volume the amount of legitimate hedging necessary to cover the small movement of wheat from farms the past two or three weeks.

"Statistics show that since the middle of September, at which date farmers had delivered about 74,000,000 bushels of wheat, receipts in the country have totalled less than 15,000,000 bushels. Wet weather halted harvesting operations and the movement of threshed grain to market. Daily deliveries from farms declined from about 3,500,000 bushels to less than 1,000,000 bushels a day.

"Smaller hedging sales should have compensated this falling off in farm deliveries, but it is reported that the sales of wheat futures at Winnipeg have been three to four times the amount warranted by farm deliveries. This is said to be the basis of the request for an investigation.

"Overseas interests are suspected of these selling operations, and there is even a suggestion of 'bull-dogging' on the part of powerful interests who hope by their tactics to crash the price structure at Winnipeg where some resistance to the weakness in other markets has been shown."

### Returns To England

Premier Ramsay MacDonald Much Improved After Long Holiday  
Ottawa, Nov. 15.—The former Newfoundland capital, Premier Ramsay MacDonald of Great Britain delivered his farewell address to the new world on the eve of his departure for the Old Country to take over once more the reins of government. His sight improved and his voice restored by a long holiday in Canada and Newfoundland, the British prime minister said Sept. 28 aboard the Queen Mary, that he had been with his daughter, Isabel, who accompanied him on the tour.

### May Reduce Exams

Toronto, Ont.—Ontario department of education plans to reduce the number of student annual examinations. It was announced by Duncan McArthur, deputy minister of education. The object is to lower costs and save students a certain amount of work.

## Premier Bennett Delivers Earnest Plea For Peace Of World

Paris.—Prime Minister R. B. Bennett, speaking at a banquet in his honor at the Inter-Allied Club here, made an impassioned plea for international peace and friendliness.

"When Canadians traversed the seas to maintain peace," he told the 150 diplomats and prominent Frenchmen gathered at the banquet, "they believed it would come again."

"Canadians know how earnestly France has striven for peace," he said. "In these days of rapid communications, the repercussions of what takes place in France to-day are felt in Canada tomorrow."

Pierre-Étienne Flandin, minister of public works in the Doumergue cabinet, proposed the Canadian premier health and acknowledged Canada's

### Aftermath Of Yacht Race

Will Not Enter Another Challenge, Says Sopwith

Newport, R.I.—Endeavour, the trim sloop which completed an uneventful but impressive bid against Rainbow for the America's cup, is not for sale.

Her owner, T. O. M. Sopwith, said emphatically, "I am not selling Endeavour," when he was advised of reports that a movement was afoot in Nova Scotia for a group of Canadian enthusiasts to purchase the blue-hulled yacht and challenge the United States for the America's cup. Sopwith said there was no reason why he should sell the craft.

"She is going back to England inside of a fortnight," he added. "I'm going to race her next summer in minimum water."

While Sopwith has flatly said he will never challenge again, there were many here who held to the opinion a challenge would be forthcoming nevertheless.

The 1924 race, most turbulent in the history of the cup, continued to be the chief topic of conversation in yachting circles and there was an amusing agreement of opinion.

The most salient points on which there was more or less accord was that the Endeavour was a faster boat than the Rainbow and that superior seamanship was the factor that enabled the United States boat to overtake and vanquish the Endeavour.

Those who argued Britain would again challenge for the cup held that Britain must have been beaten by the fine showing of the Sopwith yacht.

Members of the Rainbow camp did hesitate to admit they were extremely lucky in edging out the big blue invader.

### Leaps To Death

Convicted On Drug Charges, Takes Law Into His Own Hands  
Montreal.—Convicted a short while before as the head of a vast international drug and scheduled for sentence in about a fortnight, Pincus Brecher, wealthy New Yorker, took the law into his own hands. He leaped to his death from an uncovered passageway connecting the main cell block of the Montreal jail with the infirmary, to the cement court below.

Escorted from the court house to the jail in a private automobile, Brecher feigned a sudden illness and rushed to be taken to the infirmary.

Displaying an unbelievable strength for one of his slight build, Brecher pushed himself forward from the guard, pushed him aside and vaulted head first over the railing of the passageway. Jail doctor pronounced him dead from a fractured skull five minutes later.

### Regina Pioneer Dead

Dr. W. D. Cowan Was Member For Long Lake In Federal House  
Regina, S.D.—Dr. W. D. Cowan, pioneer resident of this city, is dead at age of 69.

Resident of Regina for nearly 40 years, Dr. Cowan served as town councillor, city alderman and mayor. He was prominent in Conservative political circles and was first elected to the House of Commons in 1917 for the Regina constituency. In 1930 he was elected for Long Lake.

### THE ROYAL COUPLE TO WED IN NOVEMBER

This picture shows the arrival of Prince George and Princess Marina from Munich on their way to visit King George and Queen Mary at Balmoral Castle. The newly engaged royal couple will be married at Westminster Abbey on November 29, and it is understood that the Prince of Wales will be best man.

### RT. REV. W. C. WHITE

Following an appeal from Bishop White, who recently resigned as Bishop of Hong Kong, the General Synod of the Church of England in Canada has granted independence to the diocese in the Far East.

### Wants To Keep Control

British Columbia Reluctant To Surrender New Wage Law  
Victoria.—With what he considers higher wage standards and labor conditions in effect in British Columbia than in other parts of Canada, the province would be reluctant to surrender control over its minimum wage and labor regulations to the Dominion authority, Hon. G. S. Pearson, minister of labor, stated.

According to the estimate of Premier T. D. Pattullo, payrolls in British Columbia have been increased \$500,000 monthly by minimum wage scales put into effect in the province during the present year.

Mr. Pearson was speaking of the report that the Dominion might propose taking over control of wage scales, at the coming Dominion-provincial conference. The minister is in agreement with the idea of having wage legislation adopted throughout Canada but is opposed to the Dominion sitting scales for this province.

British Columbia is willing to discuss the matter of wages for the whole of Canada lower than those it feels are right, stated the minister.

### Win Balloon Race

Believe Poland Has Swept Honors In Competition

Warsaw.—Poland, playing host to the 22nd annual Gordon Bennett balloon race, apparently had swept home in that competition.

Official results will be delayed several days. It was announced, pending the arrival of the balloons' landing books.

It was believed the Polish "Barszawa" (Warsaw), crewed by Z. Buzay and J. Zakreszewski, which landed near Riazan, Russia, was the winner, having covered approximately 730 miles.

The "Kosciuszko," piloted by Captain Franciszek Hynke, which landed near Voronezh, Russia, was believed to have taken second place.

The third Polish balloon, the "Polonia," burst and fell into a lake some 200 miles north of Helsinki, Finland. Its chances for third place were believed good.

All 16 that took flight have been reported safe.

## Move To Obtain A Water Conservation Plan To Fight Prairie Drouth

### Two-Board Command

New Administration For The N.R.A. Is Announced

Washington.—A two-board command was placed by President Roosevelt over the N.R.A. that Hugh S. Johnson once dominated single-handedly.

One committee of six administrative officials was selected to act under the direction of Donald R. Richberg in performing the vital task of framing future policies of the government's relation to business.

A second, composed of two industrialists, two labor experts and a college professor, was named to administer, under his direction, the industrial recovery law.

The White House announcement revolutionized the N.R.A. of fiery Johnson days was made in two executive orders. One created the "national industrial recovery board," the administrative agency of the future.

The other order revamped the already existing industrial emergency committee to include Secretary of the Interior Harold Ickes, Secretary of Labor Charles Perkins, Chester Davis, agricultural adjustment administrator, and the chairman to be selected by the new national industrial recovery board; Harry Hopkins, rector administrator, and Richberg.

### Bay Route For Livestock

Manitoba Government To Make Intensive Study Of Question

Winnipeg.—Premier John Bracken announced completion of plans by the Manitoba government for an intensive study of conditions affecting the shipment of cattle through Churchill and problems concerning foreign markets.

Hon. D. McKenzie, minister of agriculture, will accompany a shipment of livestock leaving the northern seaport on the steamship Bracken, this week. He will observe conditions at the wharf, which cattle are handled under transport to Great Britain and the various ports.

Mr. McKenzie will also study the demand for livestock products on the British market, the relative quality of imports from other parts of the world and foreign countries and the nature of competition faced by Canadian producers.

### Trapper Found Dead

Distress Flag On Island Failed To Attract Attention

Vancouver.—A white distress flag hanging from the front door of his lonely cabin at the south end of Cortes Island failed to attract aid for George Reardon, aged 55. When Warden Roy E. Allen, of Powell River, B.C., visited Reardon on September 21, he saw the signal on the door and found the owner lying face down on the floor. He had been dead more than a month from natural causes.

Col. J. H. Woods, provincial president, Calgary, assured the governor-general his wishes for an increased number of air force units were being accomplished.

### Proposals To Be Made For Amendments To The B. N. A. Act

London.—Over a worldwide wireless telephone network the British North America Act, that aged document which at once binds together the provinces of Canada in one vast national unit, yet stands as a bulwark of protection of peculiar provincial rights, will be the bone of contention at a momentous conference in Ottawa, probably in November.

While the date of the conference is no nearer fixed than when Prime Minister R. B. Bennett sent out the call to the provincial premiers, the first of this month, most of the provinces have signified their willingness to attend. Their comments or suggestions on the proposed amendments to the constitution have yet to be made but will probably be ready by the end of the month.

It is proposed to have the provinces yield to federal government control the exclusive jurisdiction over such social matters as unemployment insurance, hours of labor and minimum wages, certain forms of taxation, company laws and possibly trade regulations involving private property.

The British North America Act which brought the first three provinces into one Canadian confederation in 1867, made no provision for possible amendment. There have been amendments and the general practice has been to secure them by joint resolution of the senate and house of commons addressed to the Imperial parliament in London. On occasions they have been secured on the sole representations of the prime minister but that was many years ago.

It will be the objective of the forthcoming conference to secure approval of certain proposed amendments and also to secure, by concerted action of the provinces and the Dominion, approval by the British parliament of a purely Canadian method of amending the constitution.

It is hoped that such a method will then be possible for the Canadian people, as represented by their members in parliament, to make amendments to the constitution without further reference to London.

## Plans For Producing Valuable By-Products From Wheat Surplus Are Being Considered

Plans for producing valuable by-products from Canada's wheat surplus are being earnestly considered by a scientist at the Canadian Pulp and Paper Research Institute at McGill University.

Dr. W. Boyd Campbell, consulting physical chemist to the forest products laboratories, said that in China by an ingenious method scientists had succeeded in producing a valuable substance known as monosodium glutamate from wheat and added the surface of the possibilities of converting wheat into more costly products had only been scratched.

"If the Dominion," he said, "were to spend a small fraction of the money it has spent on providing transportation and handling facilities for the Dominion's wheat crop on research for new outlets and new uses of wheat, I believe the wheat surplus would be turned into a fortune. I would suggest the Dominion government include in the budget, at a start in the right direction, the sum of \$500,000 to be used in this research over a period of five years."

The monosodium glutamate was made in China, of which China has sold between \$1,000,000 and \$2,000,000 worth annually, was until recently a rare chemical. It is used in China and Japan much more than sugar and salt are used here.

Canadian wheat, which is of comparatively high content of protein in the best wheat for manufacture of this product, the scientist said.

Wheat worth two cents a pound was thus transformed into a substance worth from \$2 to \$3 per pound.

## Laborers Will Occupy Historic Old Cottage

Home Of Anne Boleyn Bought By Henry Ford

The only home Anne Boleyn ever owned—a cottage near Chelmsford, England—has been bought by Henry Ford.

He is spending \$1250 on having it rebuilt as it was 400 years ago, when King Henry came down from London to see his sweetheart who changed the course of English history.

Then it will be added into new cottages to be occupied by laborers on Mr. Ford's farm. One of Mr. Ford's farm workers lives there now.

Bull's Lodge—Anne's surname was often spelled Bull—stands back in a field behind a tangle of country lanes.

It was here, then one day's march, now an hour's ride, from London, that the Crusaders of the middle ages pitched their first camp on their way to the Holy Land.

And it was here that M. Livermore, a south country shepherd, brought his flock to graze six years ago. Down below, in the cellar, he found an underground passage leading to the castle across the fields.

It was along this dark passage that Henry came to visit pretty Anne Boleyn. Today the castle is a girls' school. Mr. Livermore gave up his flock to work for Mr. Ford.

## Electric Light Cyls

Turns Illumination On Each Night At Proper Time

Experiments in connection with long-distance control of street lighting systems have been conducted by the Stockholm Electric Light and Power Company of Stockholm, Sweden, and satisfactory results obtained.

A photo-electric cell, which is affected by light, announces the time for switching the street lighting system on and off. The "electric eye" gives the alarm irrespective of the time of day or night when the switch should be thrown in or out.

## Shares Quickly Taken

The time limit for subscribing to shares in the Bank of Canada expired Sept. 21 at midnight and applications posted after that time were returned. In the five days during which the books were open under subscriptions were received in a volume exceeding all expectations, and the result the issue was oversubscribed.

Wife (back from the shop): "Well, dear, I've found just the costume I've been looking for."

Husband: "Nonsense! I certainly couldn't have afforded to buy it for you."

The only plausible reason for the husband's remark is that the fruits grow in clusters like giant bunches of grapes.

W. N. U. 2056

## Screenings Used For Fuel

Furnaces At Power House At Churchill Fed With Weed Seeds

The elevator at Churchill requires great power to operate. It has over six miles of belts which convey the grain from the bins to the ships' holds. Machine tip the freight cars, filled with wheat on one end and then on the other, emptying the contents into the pits at the rate of two minutes a car. Fans, elevators and a score of other appliances all function by electric power.

Furnaces in the power house produce steam that generates this energy, and most of the heat comes from pigweed seed. The furnaces are fed entirely from screenings obtained in clearing the grain which flows in from country elevators. No coal is used.

Wilt out from the bulk of the screenings, but the tremendous heat of the fuel proceeds along the traveling grain under the belts comes from the small black seeds about the size of pinheads. These are from the farms where pigweed is a nuisance to the grain growers.

The grain arriving at Churchill is in the same condition as it leaves the threshers on the farms. The grain is being cleared in the same way as the grain brought in from the grain elevator. Since the elevator began operation more than three years ago, the supply of screenings has always been sufficient not only to supply power for the elevator, but to light up the tower, including the spotlight on the tower whose rays stretch far out on the rolling waters of Hudson Bay. The bright light welcomes the ships of the world to this new harbor.

500 NEW AND LOVELY FASHION MODELS THAT HIT THE BUTTLE RIGHT DOWN THE BACK

You know that Paris is using yards and yards of rayon velvets that have the appearance of woolen, for fall dresses.

And here's a delightfully smart example, and extremely easy to copy it exactly.

It is a watermelon (an off-red) woolly rayon with printed white flecks. The deep yoke and belt are of plain dull beige silk in toning with the flecks. The buttons are black bone.

It's unusual, and high priced, but back, crepe maroon would also be attractive for it with the left of fabric. Make the yoke of thick dull black silk. Have the buttons covered with the satin. Carried out in black silk, it's also exceedingly smart.

Size No. 550 is designed for sizes 14, 16, 18 years, 56, 58 and 60 inch bust. Size 36 requires 3 1/2 yards 39-inch material. Price, \$12.50, plus 39-inch contrasting.

Price of pattern 20 cents in stamps or coin (cash is preferred). Wrap come carefully.

## Livestock Production In Canada

Increase In Exports To United Kingdom Is Shown

The fact that every province in Canada is well adapted to the production of livestock gives this industry a wide basis across the Dominion. Canadians are generous meat eaters, consuming in 1933 an average per person of 74 pounds of pork, 56 pounds of beef, 10 pounds of poultry and 6 pounds of mutton and lamb. Each Canadian, on the average, supplements these rations with 30 pounds of butter, about 2 1/2 pounds of cheese, and more than 21 dozen eggs.

To supply the home market is therefore a large order for the Canadian livestock, dairy and poultry industries, and considerable contributions are also made to foreign trade.

During 1933 there was an increase in exports of live cattle to the United Kingdom, the total for the year being 50,317 head compared with 18,558 the previous year. About 10,000 head of cattle were exported to other countries. Exports of beef in 1933 amounted to over 10 million pounds compared with about 4 1/2 million in the previous year, and exports of pork jumped from 16 million to 70 million pounds.

The estimated number of meat and dairy animals in Canada as at June 1933 was: Milch cows, 3,654,000; other cattle, 5,182,000; sheep, 3,385,000; swine, 3,260,700. All classes of poultry numbered over 50,000,000. The gross agricultural wealth of Canada in 1933 was estimated at \$5,230,944,000 of which \$103,135,000 was represented by livestock and \$33,156,000 by poultry on farms.

## Returns From Northern Voyages

Capt. Bartlett Secured Much Scientific Data During Trip

Returning from the north with valuable specimens of wild life and much scientific data, Captain Bob Bartlett arrived recently on the ice-circled schooner Morrisey, and described his trip as "the most successful of any of his many adventurous voyages."

The veteran explorer was unable to break his way through the ice to the Peary monument, but from a position 25 miles away could see the ship's rays reflected from the bronze top.

Under the auspices of the Academy of Natural Sciences of Philadelphia, he led a scientific party into the northern channels late in June and spent the summer collecting material believed to be of great value.

It is estimated that at least 3,000 lambs were required to supply the retail butcher trade at Montreal. The supply is short of the demand.

More than 1,000 Japanese ships have been equipped with radio telegraph equipment.

## Outbreak Of Pale Western Cutworms Of Unusual Severity Forecast After Annual Survey

### Preserving Old Parchments

Britain To Collect Priceless Documents Under One Roof

Parchments recording the birth of kings, the execution of queens, love letters of princes, and the trembling signatures of traitors and thousands of other historic documents may soon be gathered together into one central museum of British records in London.

At present these priceless papers are scattered in various buildings, such as the Records Office, the British Museum, the College of Arms, the Houses of Parliament, Lambeth Palace and Windsor Castle.

Lord Northampton, master of the rolls, who is chief of the public records office, is the moving spirit in the plan to bring together these scattered leaves of our national history.

It was he who a few months ago took steps to prevent the destruction of ancient parchments in the hands of unwary owners of their value.

It is illegal to sell parchment records for commercial purposes until the state has examined them.

Recently it was found that large numbers of ancient records had been sold to make heads for toy drums.

Another case parish records being used as grease-proof paper in a fried fish shop.

Now the documents which may soon be brought under one roof are the warrant for the execution of Mary Queen of Scots, the last letter of Anne Boleyn to Henry VIII, the will of the kings and queens of England from Elizabeth to William IV, the death warrant of Charles I, and Magna Carta.

### Should Have Advertised

British Honduras Neglected Public Campaign For Chief Product

In this age when so much depends on international trade, even a sharp decline in the use of chewing gum can financially embarrass everybody and throw out of the occupations of a "tiny nation."

For a number of years the people of British Honduras have been subsisting mainly upon the proceeds of the sale of chic, the raw material of which chewing gum is made.

When the depression started people began cutting down on things that were absolutely necessary. Chewing gum came under that category. Consequently the exports of chic to the United States and to other countries to be facing a financial crisis due to the loss of trade.

Now the citizens of British Honduras must do something else to keep the flow from the door. They have decided to develop their banana, citrus fruit and hardwood exports in order to avoid bankruptcy.

Apparently the British Honduras are not successful enough. "When they noticed that the exports of chic were on the down grade, they should have started publicity stunts to boost their business. For example, contents to see who can stretch gum the farthest and who can chew the biggest would do much to increase the sale of gum and help the chic trade. Perhaps it is not yet too late to try this suggested stimulant—Brookville Recorder and Times.

## Nothing More Unusually

Tattered Billboards Are A Blot On Any Road

Alderman Allan Tove, of London, may have been joking when he brought the matter up, but he is in agreement with him when he protests that circuses should be made to tear down or cover up their billboards after the show is over.

The same thing should be done in the case of political candidates and others who make use of this method of reaching the public. We can't think of anything more unsightly than tattered billboards telling of an event that is "dead and buried."—British Cities Star.

## Without Government Aid

Farmer's Advocate says: "The Ontario Minister of Agriculture, Honorable Duncan Marshall, is sending four fair boards that the Highland and Agricultural Society of Scotland has been holding shows for 100 years without receiving any government aid. More than that, they have 1180-000 tucked away in reserve. Perhaps we'll just have to have more Scots on our fair boards."

Typist: "Do you know what time I have to get up to be here by nine?" Boss: "No. Why not get here by nine and find out?"

Annual world production of silver is about 50,000,000 ounces, the bulk of which is used by the chemical industry.

An instrument used by astronomers to study the stars can detect the heat of a candle 100 miles away.

Foot ailments afflict two women for every eleven men.

An outbreak of pale western cutworms, which are the progeny of economic forestry in Western Canada in 1935 was forecast with completion of annual surveys by officers of the entomological branch of the Dominion department of agriculture.

Prospects are the outbreak will be over a considerably wider area than in 1934 with the general zone embracing the country from Indian Head, Sask., west to within 20 miles of Calgary and south to the international border. Extent of probable loss through the pests depends to a large degree upon the rainfall in the spring during the growing period of the crop.

Farms within 10 miles of Markham and Sarnia, within 20 miles of Chamberlain and Hazenmore and within a roughly-shaped oval between the cities of the Red River and Cavendish, Alta., on the west, and south from Biggar almost to Swift Current will require special attention against the plague. Farms within 10 miles of Cowley, Alta., and within 20 miles of a line from Lethbridge through the Red River valley, extending similarly along a line from Coats to Champion, Alta., will also be heavily infected.

The cutworm attacks wheat and other grains during the early part of the growing season and frequently devours a crop in a heavily infested field. Precautions against loss are based upon a knowledge of the habits of the pest and aim at keeping the land free from cutworm eggs.

This is accomplished by plating land which has not been disturbed during the previous year between August 1 and September 15, by any activity which would break the surface soil crust.

### Hard On Booksellers

British Dealers Buying Back Many Old Books

Booksellers in London are burning books for which hundreds of pounds were paid a few years ago.

The first edition of the first edition of the Brownings, Wordsworth, Swinburne, and other famous authors, are being sold for a few pence by Carter and Graham Pollard—two young bibliographers—to be forgery.

Contamination has been caused in England and the United States by the assertion, because the books are not only in the possession of many private readers, but also in honored places in public libraries and museums.

A number of booksellers who bought the volumes in good faith at auctions are now paying out hundreds of pounds to customers to whom they resold them.

One West End bookdealer with a large British and American clientele said: "I have written to all my clients who are in possession of these volumes offering to repay the full purchase price upon their return. As the volumes come back I am turning them."

## Why Go To College?

Answer Depends On Whether Education Is Really Desired

The question whether in these days it is worth while to go to college cannot be answered in any general way. It depends entirely upon the young man or young woman concerned. If the idea in mind is to have a good job, enjoy social activities, indulge in athletics and at some time meet with a girl, then there is no reason to stay away. The universities have been tightening up on this type of student for years past and there are going to tighten up as never before in the future. Social parasites will be given no welcome, the university is not for them. There is just one legitimate reason for going to college and that is to secure the training and education that a college can give. As the time goes by it has no time to waste its efforts on the people who are not after training and discipline.

Typist: "Do you know what time I have to get up to be here by nine?" Boss: "No. Why not get here by nine and find out?"

Annual world production of silver is about 50,000,000 ounces, the bulk of which is used by the chemical industry.

Foot ailments afflict two women for every eleven men.

## A Growing Evil

### Gambling On Sporting Events Has Tainted Modern Thought

"I bet you!" How frequently this expression pops into speech. "You bet" has become an American synonym for the affirmative in reply to questions. "Put up, or shut up" ends most arguments. As idioms these phrases may seem harmless, but idiom has its roots in the thoughts and customs of a people.

With too many nowadays everything is a gamble. People bet on anything—stock or grain prices, differences of opinion as to facts, whether the passing auto license will have a last number odd or even, or a fly will within ten seconds return to a bald man's head.

Most common of all, however and perhaps the main source of this problem of modern society is gambling on sporting events. One needs only to observe how many of those around him as much as studying racing forms, or keep his ears open in the elevator of his office building for conversation about baseball pools.

Strictly speaking the very word gambling itself implies money staked on the outcome of sporting contests. Gambling thus closely associated with sport has demoralized many phases of beneficial activity. Those branches of sport not degraded have been protected only by the most determined surveillance.

Worse than its effect on sports, however, is the influence upon those who indulge. They yield to temptation to profit at the expense of others, to get from another money without giving an equivalent for it. It may seem innocent to bet a dollar with a friend on the outcome of some contest but the seed is there. And what is to prevent such a bet, cultivated, from growing?

Consider the character of those who gamble most, the professionalists, who have abandoned all productivity. Endeavor. Are they not everywhere known as leeches on honest endeavor? Yet gambling has become so common their standards of behavior are accepted and imitated, and a notorious gambler may mingle with honorable society.

Desire to gamble is recognized by primal ancestors as the driving force behind bank robberies, swindles and kidnappings. The criminal might earn in useful work the modest sums needed for ordinary living, but gambling requires large sums. The police chief of one great city has testified that he protected a few gambling houses, having an understanding with the proprietors who could be depended on to act as informers. The first place the average criminal goes with his loot is to a gambling house, he said.

The association of gambling with sporting events has contributed to its popular acceptance, to the general unconcern of its evil. It has so tainted modern thought that many otherwise honest and ethical persons cannot see why it is evil.

To escape eventual condemnation, sport must cease to send out this poison into mass thought. In fact, sport, to be real sport, must be purged of the gambling taint. A beginning should be made.—Christian Science Monitor.

### Pupils Turn Teacher

#### Helen Keller Now Instructing Benefactor In Braille System

In the quiet of northern Scotland for the past 15 months Helen Keller and Ann Macy changed their lives about, with the famed blind-deaf author in the role of a patient teacher.

The labor of love softened to some extent the tragedy which came late in life to the woman under whose tutelage Helen Keller rose to eminence.

Ill and almost totally blind, Mrs. Macy learned to read by the Braille system, from the hands of the woman she took as a girl of seven, to teach to read, think and write.

Despite the strains of teaching, Macy is making in Braille, her health is at a low ebb, and two operations may be necessary when she returns to the United States, one physical, the other mental.

### King Chicks In East

Serious numbers of hog-chickens in animals in the Seattle State. Marie died brought combative measures from the Ontario department of agriculture. Efforts to check the outbreak are being made with the use of serum. In one herd 53 animals were affected, 34 of them dying. The remainder had to be exterminated. Twenty-seven pigs were killed in an attempt to stamp out the disease in another section.

The average man would rather compromise than fight.

## EXCELLENT VIEWS OF THE BRITISH AND UNITED STATES YACHTS

Here are the yachts in the international races for the America's Cup in England; right, the Rainbow, piloted by Harold S. Vanderbilt, of the United States. Left, the Endeavour, T. O. M. Sopwith, of the Atlantic off Newport. Left, the Endeavour, T. O. M. Sopwith, of the Atlantic off Newport. Left, the Endeavour, T. O. M. Sopwith, of the Atlantic off Newport. Left, the Endeavour, T. O. M. Sopwith, of the Atlantic off Newport.

### Subject To Revision

#### Egg-Grading Law Can Be Changed If Necessary

Egg grading has done more for the poultry industry than all other poultry regulations combined, and yet it is the subject of intermittent criticism and remains a target at which even poultrymen take occasional pot-shots. One correspondent recently complained that eggs should be sold by weight. The egg grading regulations provide for that adequately, since the weight of the egg is one important factor determining in the long run quality is of more importance. One might find a stolen egg under the driveway in which all the eggs would weigh 24 ounces to the dozen or more, and they would be valuable except as missiles at a hot political meeting.

Fundamentally the egg grading law is sound and right. We do not say the regulations are perfectly written or enforced 100 per cent. No man-made law is perfect. Even the ten commandments, which are universally accepted as sound and just legislation, are not observed as they should be. Human nature is still too frail to conform strictly to any law, be it human or divine.

The egg grading regulations were revised recently. W. A. Brown, of the Livestock Branch, who administers them, says they will be revised again in the time. They are not like the laws of the Medes and the Persians which never change. If any of the regulations are found to be inimical to the poultry industry then a complaint lodged by a majority of poultry keepers should be lodged at once. And when any representative body of poultrymen have a grievance to present they are assured a sympathetic hearing.—Farmer's Advocate.

### More Valuable Crop

#### Better Prices For Grain Help To Offset Decreased Yield

The Sanford Evans statistical service estimates the value of the 1934 wheat crop of 285,000,000 bushels, based on prices paid at country points in the first six weeks of the current season at \$17.55,000,000. This is about \$31,000,000 more than was netted for the crop of 298,000,000 raised in 1933.

Aside from wheat, the grain grown this year has had good prices for oats and barley. Any grower who had the good fortune to raise snow-covered malting barley got as much, and sometimes more, for it than the price of top grade wheat. Two or three years ago it was so unprofitable to market barley farmers used it for fuel.

### A Big Ride

"Do you make life-size enlargements from snapshots?" asked the girl.

"Certainly, miss," answered the photographer. "That's our specialty."

"Well," said the girl, "let's see what you can do with this picture of the Grand Canyon."

There are 244,353 possible bridge hands for every possible poker hand.

### HERE'S THE "MUG"

This turkey-necked cup is the prize of victory in the international yacht races for America's cup, in which the British boat, "Endeavour", and the American craft, "Rainbow", competed off Newport, R.I. Sir Thomas Lipton, who tried many times to win this coveted trophy, referred to it as "that old mug".

### Wood For Heating Purposes

In spite of the preference for coal and other fuels for heating purposes, a large amount of wood is still so used. The quantity used in normal years is estimated by the Forest Service, Department of the Interior, at 913 million cubic feet, or 9,511,221 cords. Fuel-wood formed about 30 per cent of the total amount of wood cut in the Dominion for all purposes. During the past two or three years there has been a large increase in the amount of wood used for fuel.

### Watching The Rails

#### Writer Tells Of Peaceful Day During Train Journey

The following by Sidney Huddleston appeared recently in the Christian Science Monitor:

"The observation car was empty save for myself and the conductor on a beautiful sunny Sunday afternoon. The radio was singing hymns that I had known since my boyhood. They touched tender memories."

"I sat watching the rails as we steadily pursued our way. On either side was cultivated land and here and there little woods. There were few towns along this route."

Through the whole of that sunny afternoon the radio sang hymns and the steel rails, ruled straight across the country, ran closer together mile after mile, until somewhere on the horizon, an incalculable distance away, they met."

I have spent many peaceful days in a life that has been full of movement, but I can think of no more peaceful day than that which I spent, virtually alone in the observation car, as I was carried to my destination, listening to the radio singing hymns, and watching the endless flow of the steel rails, drawing nearer and nearer to each other, across the flat country, and disappearing on the horizon."

### Reindeer Fall From Glacier

#### More Than 300 Lost Footing And Trended South

The faraway town of Narvik, Norway, in the mountains will have a Christmas eve alibi for harassed fathers and mothers obliged by circumstances to explain that Santa Claus won't come this year.

More than 300 reindeer which plunged from a slippery glacier into an abyss are dead. Some were killed outright. Others clung for a time to rough places on the inclined surface of the glacier, but all lost their footing and fell into the chasm.

Either was not put to any practical use until 1842, although discovered in the 16th century.

### Early-Ripening Wheats

#### Several New Hybrids Of Promise Have Been Developed

Producing an early-ripening, high-yielding, and high quality variety of wheat, for those areas requiring wheats which mature relatively early is the problem in the work of the Cereal Division of the Dominion Experimental Farms unit in importance to the developing of a rust resistant wheat of high quality and good yielding ability. While the varieties Garnet and Howard, which were introduced by the Cereal Division in 1926 and 1928 respectively, have undoubtedly contributed immensely to the success of large numbers of farmers who reside in areas subject to late summer frosts, these varieties have their defects.

Howard, for instance, lacks inherent yielding ability and resistance to rust, but in other respects, especially as regards quality, is an outstanding variety. Garnet, on the other hand, possesses the ability to produce high yields and resist the ravages of rust to a great degree but it is not as satisfactory as it might be on all markets in respect to quality. Attempts to combine the desirable features of the above varieties by crossing have been receiving much attention in recent years, with the result that several new hybrids of promise have been developed and only await the necessary evaluation.

### Bulb Planters Seek Workers

#### Men With Large Feet Wanted To Tend Soil

Here's good news for medium-sized men with big feet who like the feel of wooden clogs.

Sooner will be in demand among the bulb planters of South Holland (Lincolnshire), who are beating the Dutchmen at their own game.

And here is what they will be paid to do. They will rise early in the morning, put on their big wooden clogs and plod out to a field where lilies have been planted in a shallow sandy bed.

They will then walk casually up and down the lily bed, treading not too lightly and not too heavily, and will go on walking like that until they have covered all the beds.

It is quite an important job, too, because it is yet another step in the advancement of the bulb-growing trade in the British Isles.

### Accomplished Unusual Feat

Taking a photograph of Mount Rainier in Washington, 150 miles away, was the unique feat accomplished by R. J. Janesman, automobile dealer at Victoria, B.C. He took pictures as a hobby. Janesman made an excellent infra-red photo of the mountain from the uplands of this city at twilight by using a telephoto lens.

Professor (after lecture): "Any questions?"

Student: "Yes, sir. How do you calculate the horse-power in a donkey engine?"

Humming birds, swifts, swallows and martins cannot walk or hop on a horizontal surface.

No man is interested in another man's troubles—unless he is a lawyer.

## Unemployment Insurance

### Dual Plan Suggested By Retired British Banker

Adoption by Canada of an unemployment insurance plan which would have two separate funds, was suggested at Ottawa by E. H. Long, former manager of the Westminster Bank Limited, Aldwych, England. This would provide the good basis of the revised system in England, the retired British banker considered.

A contractual fund could be set up for those now employed to be built up by contributions of the employer, worker, and the state, budgeted according to anticipated unemployment, he considered.

The unemployed could come under a transitional fund which would be a state obligation entirely, expenditures fluctuating according to necessity and being taken from taxation, said Mr. Long.

In other words, he stated, the Canadian system of direct relief would continue as "transitional aid" and those now employed could be insured against future unemployment upon a contributory basis.

### Locating Old Forts

#### Find Ruins Of Ash House Built In 1786

A search for the site of Ash House, a fort built in 1786 by the Northwest Fur Trading Company, commenced about 25 years ago by S. H. Forrest, K.C., was completed when the buried ruins of the trading post were discovered a few miles north of Lander, Man. E. H. Hetherington, G. A. McMoran, H. Forrest, of Souris, and Gen. Landreth, of Lander, accompanied Mr. Forrest.

Mr. Justice Montague, of Winnipeg, and Miss Landreth visited the site of another old fort on the west quarter of the same section, 31-5-24. Meads, Forrest and Hetherington had before that located the site of Fort Grant, about 10 miles west of Hartney. The sites were hidden by earth, aspen, prairie grass and trees, only protruding bones and the excavations for cellars marking the spots, but after searching, several oak pickets, remains of the stockade, were discovered at various points.

Dr. D. A. Stewart, of Ninette sanatorium and past president of the Manitoba Historical Association, with Col. Dave Wright, of St. John, N.B., have been interested in the search with Mr. Forrest and have cooperated in obtaining information regarding the probable location of these old forts.

### Big Irrigation Project

#### Plan To Drain Waters Of South Saskatchewan River

A. W. Wilson, Pawnee, consulting engineer, A. E. Martin and W. B. Benn, Moose Jaw, will press an application for rights on the South Saskatchewan river from the provincial government. The application has already been filed with the government, but no action has yet been taken.

The rights sought are permission to excavate a drainage ditch, with a concrete highway on top and an irrigation project to cost in the neighborhood of \$15,000,000, whereby it is hoped to make a garden spot of the south Saskatchewan valley. Sufficient power would be developed to take care of the irrigation project, and a domestic water supply for Moose Jaw and Regina and intervening points would be provided.

The proposed sponsors say, will require 65 per cent of the \$15,000,000 for labor and it will provide for industrial development in central Saskatchewan.

### Two New Cattle Foods

#### Process Announced At Baltimore By Chemical Engineer

Two new cattle foods, one looking like a plug of tobacco, the other like Boston brown bread, both offering aid for stock raising in drouth, have been announced.

The plug is made of molasses and cottonseed meal; the Boston brown bread of molasses and corn meal. Both use a new scientific principle for mixing molasses, which has been for many years a cattle-fattening food, but difficult to handle because of its stickiness.

The new process was announced by Guy Leonard, a chemical engineer. He is well known among chemists as the man sent to Baltimore from England in the Great War to assist in developing an acetone process for use in making cordite.

The 1933 lumber production of the United States has been estimated at 15,325,000,000 feet.

## FANCIFUL FABLES

## WORLD HAPPENINGS BRIEFLY TOLD

Lord Baden Powell is sailing on a world inspection tour of the Boy Scout movement, of which he was the founder. The tour will end in Canada and will last 10 months.

Air service connecting Algeria and French west and equatorial Africa was established when the first mail plane, which left Algiers Sept. 1, returned after a successful flight. The other terminus is Brazzaville.

Dissolution of the York County Children's Aid Society board, of which former Premier G. S. Henry was chairman, was announced by Hon. David Croft, Ontario minister of public welfare.

Boycott of all firms paying unfair wages or forcing their employees to work under unsanitary conditions was urged by J. F. Marsh, Ontario deputy minister of labor, in an address to the Toronto Local Council of Women.

Adoption of a national health insurance scheme will be urged at the proposed Dominion-provincial conference at Ottawa this fall by Hon. G. M. Weir, British Columbia provincial secretary, in a brief presented on behalf of the Canadian Medical Association.

To mark the centenary of South Australia state in 1936, the government has received a gift of \$500,000 towards completion of the new parliament houses. The donor is Sir Langdon Bonython, proprietor of the Adelaide Advertiser, and one of Australia's foremost industrialists and philanthropists.

## Little Journeys in Science

### CARBON MONOXIDE

(By Gordon H. Quest, M.A.)  
Frequently we read of accidents caused by the escape of carbon monoxide gas from the exhaust of motor cars, or from furnace pipes. Produced by the burning of carbon, in coal gas, and in motor exhausts, this gas, which is also known as carbonic oxide, is very poisonous and is doubly dangerous because it has almost no odor, and overcomes victims so quickly that they rarely have time to escape from the fumes.

The deadliness of the gas lies in its action on the blood, where it displaces the oxygen in the haemoglobin, through which it reaches the body tissues. It is identified in the body because of the bright red color which it gives to the blood.

It is estimated that one volume of carbon monoxide in eight hundred volumes of air is fatal when breathed for half an hour, while much smaller quantities are known to produce unpleasant effects if inhaled for any length of time. Small cars travelling at fifteen miles per hour are said to give off forty-one cubic feet of carbon monoxide per hour, while a large car gives off one hundred and eighty-four cubic feet of the gas in one hour. Thus, in large cities the air continually contains small amounts of the gas, and considerable attention has been given in some centres to purifying the air, particularly in tunnels and underground railways. This is done by passing the air over a substance known as hopcalite, which changes carbon monoxide into harmless carbon dioxide.

Mice and birds are particularly sensitive to carbon monoxide and sometimes rescue crews in mines take canaries in cages with them into the mines following an explosion in which this gas is believed to have been released.

"What is a molecule?" asked the teacher.  
"A molecule," said John, "is something so small that it can't be seen, even through a microscope."

John—Could I borrow enough on my pocket to buy a car?  
Official (sighing): You might, but we'd have to cancel your policy if you drove that kind of a car.

Play: Any kind of violent exercise that you would call slave slavery if you got \$3 a day for doing it.

## OGDEN'S CUT PLUG

### Russia A Powerful Factor

Much Safer To Have National Member

Russia has been admitted to the League of Nations. Any other country would have been incredible, granted Russia's willingness to come in.

The League of Nations is an agency, faulty, perhaps, but the most effective in existence to-day for the preservation of peace in the world. Whatever we may think of the Soviet theory of government, and their policy, the fact remains that Russia is one of the great nations, and a factor in world affairs. Obviously, therefore, it is much safer to have Russia on the inside with Britain and France and all those associated with them, than on the outside with Germany and Japan and the United States as critical observers.

Those who would have excluded Russia from this free assembly of the nations think of the League as a kind of secret society for a few of the elect. That view is utterly and fantastically absurd. If Russia is a danger to world peace through her plan of government, there is all the more reason for subjecting her to the presumably pacifying influences of League membership—Ottawa Journal.

"Haven't I seen you somewhere?" asked the young man.  
"Quite likely," replied the girl. "I've been there."

The man who pays as he goes seldom gets beyond the speed limit.  
More than \$7,500,000 was spent by tourists in Norway last year.

## The SNAPSHOT GUILD

### THE "WHY" OF LENS STOPS

Two pictures, of the same subject and setting; one made with the lens wide open and the other with the lens stopped down. Note that there is less detail at all in the background of the snap made with wide open lens, while the other shows the distant bridge very well. If it's dark you want, cut down the lens opening!

PRACTICALLY all cameras, with the exception of a few extremely simple models, have some means of varying the amount of light passing through the lens. Why? Well, why do you tend to squint in bright sunlight? Simply because there is so much light in the open air that, unless you squint, your eyes cannot distinguish detail. In the dark your eyes dilated in order to take advantage of every available ray of light.

Cameras and eyes are much alike. One for average shots and one for use when the light is very brilliant. In certain other respects, diaphragm settings are arbitrarily numbered from 1 to 4, giving you that many opportunities for adjusting your snapshooting to light conditions.

The best known system of diaphragm control is the "f" system, used on more advanced cameras. In this system "f" represents the ratio between the lens opening and the distance from the lens to the film. When someone says that he took a picture at f11, he means that his lens was adjusted so that the opening was 1/11th of the distance to the film.

### Would Segregate All

Young Law Offenders

Church of England Synod Urges Action By Parliament  
Canada should segregate her youthful criminal offenders during both trial and prison terms, the synod of the Church of England decided.

On motion of Magistrate J. E. Jones, Toronto, a resolution was passed urging the parliament of Canada to provide separate trials for boys between 16 and 21 years of age and separate penal institutions, similar to the Borstal system in England, where possible.

Most Rev. J. C. Roper, archbishop of Ottawa, seconded the resolution and undertook to bring the matter before the government.

Up to the age of 16, Magistrate Jones explained, the juvenile courts were available, but between that age and 21 there was no special provision. He pointed out the dangers to young offenders of contamination with older and more hardened criminals.

The synod also approved another resolution by Mr. Jones, urging provincial governments to implement Dominion government legislation respecting probation where it had not already been done.

It was certainly the younger offenders to whom attention should be directed, said Mr. Rev. A. Sovereign, bishop of Athabasca. "There are few grey-haired men in our penitentiaries now," he declared. "They are boys, many of them about 18 years old."

The Nazi flag of Germany is prohibited in the province of Buenos Aires by presidential decree.

Buttermilk has the same food value as skim milk.

### Mysterious Bomb

New United States Bomb Referenced To As The Bouncing Betty

A mysterious bomb called the "Bouncing Betty" bounded into the United States senate munitions probe at Washington, and bounced right out again.

Inferences that it is a new type of bomb being developed by the war department hailed references to it almost as soon as it was mentioned.

John W. Brown, president of Federal Laboratories, Inc., in a Chicago dispatch, quoted prices on gases and bombs requested by a Cuban government representative, said by his South American agent.

"I presume the new bomb he is referring to is the 'Bouncing Betty.' If that is the case, I am sure he cannot purchase it."

"What is the 'Bouncing Betty'?" queried a senator.  
"I understand it is a bomb now in the hands of the war department," Young answered. Instantly the subject was dropped.

### International Understanding

News An Important Factor In Directing Destinies Of Nations

News as an international force, Dean Carl W. Ackerman, of the Columbia University School of Journalism, declared, is a potent factor in directing the destinies of nations.

Because of the growing importance of international journalism, Dean Ackerman proposed that it be seriously studied in educational institutions of Great Britain, France and the United States, "which should take the lead in making international news not only the sinews of public opinion but the sinews of peace."

Dean Ackerman suggested a new prize in international journalism be awarded to a press association, newspaper or individual correspondent "making the greatest contribution annually to international understanding" and that, to award this prize properly, a clearing house be created "so that full information of the press activities of the world might be available."

### Largest Flag In World

A school has been formed to hoist a Japanese national flag, which, it is claimed, will be the largest in the world, on the summit of Fujiyama, the sacred mountain of Japan. The flag will be 80 feet long and 56 feet wide, and when hoisted, will be visible from a great distance.

## SOURD ON THE WORLD?—THAT'S LIVER

Wake up your Liver Bile

—No Calomel necessary  
Many people who feel sour, sluggish and generally unwell, know the cause of their ills is sourness of the liver. It is the liver that produces bile, and it is the bile that keeps the system in good health. If the liver is not working properly, the bile is not produced, and the system becomes sour and sluggish. It is the liver that produces bile, and it is the bile that keeps the system in good health. If the liver is not working properly, the bile is not produced, and the system becomes sour and sluggish.

India Grateful For Help  
Grateful thanks for help of all India for the world-wide contributions to the earthquake fund were announced by the Earl of Willington, viceroy of India, when he declared the fund would close Oct. 1. A sum of \$2,225,000 has been contributed.

Florida raises about 4,000,000 head of poultry.

## BABY AILMENTS Relieved

"Baby's Own Tablets have been the only medicine my four children have ever needed. I am a mother and it has been necessary to consult my doctor. So writes Mrs. J. M. Pliner, a Cleveland, Ohio, N.Y. When the baby or child is colicky, has loose stools, is constipated, has a fever, is teething, or has a cold, or is indigestible, colic or diarrhoea or is restless, give Baby's Own Tablets for safe, quick relief. ### Recipes For This Week

(By Betty Barclay)

#### CHOCOLATE NUT CAKE

- 1 cup butter or butter substitute
- 1 cup sugar
- 4 eggs
- 1 cup mashed potatoes
- 2 squares chocolate
- 2 cups flour
- 3½ teaspoons baking powder
- 1 teaspoon cinnamon
- 1½ teaspoons nutmeg
- 1½ teaspoons grated nutmeg
- 1 cup chopped Brazil nuts
- 1 cup milk

Cream the butter or butter substitute and one cup of sugar. In another bowl, beat the egg-yolks with the remaining cup of sugar. Combine the two mixtures. Have ready the hot mashed potatoes, which should be without lumps, add to them the melted chocolate and combine with the first mixture. Mix and sift the dry ingredients and add the nut meats. Add to the cake mixture, alternating with the milk. Fold in the stiffly beaten whites. Bake in a loaf pan in a moderate oven. When cool, cover with marshmallow frosting or boiled frosting. This is a large moist cake, which will keep well.

#### ORANGE MILK FOAM

(Serves 1)

- 6 tablespoons orange juice
- 6 tablespoons evaporated milk
- 6 tablespoons cold water
- 1 teaspoon sugar
- 1 teaspoon grated orange rind

Beat or shake thoroughly. Serve at once in a large glass, chilling with ice if desired. Fresh milk may be used in place of evaporated milk. This is an excellent mid-morning drink for children who are undernourished. It is also a good beverage accompanying meals. Evaporated milk makes the drink very economical.

## Ask Mother—She Knows

Mother took this medicine before and after the babies came. It gave her more strength and energy when she was overworked and run down... keep her the job all through the Change. No wonder she recommends it.

### Decline Of Manners

Impoliteness And Rudeness Considered Smart By Some People

The decline of manners has become clearly marked during the past few years and is by no means confined to the one sex. Ordinary politeness and civility have departed from the masses and their exercise is, apparently, something to be forgotten rather than prompted. It is now regarded in many quarters as the smart thing to be impolite and rude, and the influence of the home and the school, which has fallen down in so many other things, is equally negligible in this regard—Brookville Recorder and Times.

## THE TENDERFOOT

By  
GEORGE B. RODNEY  
Author of "The Coronado Trail,"  
"The Canyon Trail," Etc.

## SYNOPSIS

"You've fallen here to a half-share's plenty of trouble," the lawyer told Gerard Keene. "The broken spur has been systematically going to ranch and old Joe Chry, your partner, is drinking himself into ruin."

But Keene decided to go where what was happening for himself—not as Gerard Keene, half owner of the Hour-glass ranch, but as a young man, tenderfoot, in a Montgomery Ward wilderness outfit.

(Now Go On With The Story)

## CHAPTER II—Continued

"Listen to old dad, talk you be growled. 'His talk is sure potent.' Fragments of that talk came to them on the hot wind from the desert. Under that word-lash the burros frankly trotted. Dustin halted him from cupped hands.

"'Ho! Skinn-shin! . . . Dad . . . I know . . . Come on over to the house.'"

Kane stared at them from rheumy eyes white with crusted alkali and came slowly across to them, wiping his lips on the back of a dirty, hairy hand.

"I'll wait till I strip the packs. These assen'll sure roll on 'em if I wait." He followed the patient burros to the corral where they surged at the full water-trough and his voice shrilled out in profane appeals.

"Hi, you Baptist! Git to hell out'n that! . . . A chunk of rock as big as an orange smote the reluctant Baptist behind the ear and brought him to 'r. 'Presbyterian! Where the hell's your faith? You're gut? Episcopalian . . ."

In five minutes he had his packs striped and lined up and came up to the spurs wiping his face on his sleeve.

"Them damn asses," he growled, "are more trouble 'n thoroughbred. I got to chuck 'em with rocks on the trail to git 'em some a day outen 'em. In comp, the minute I take of the packs they wander off. They'll stray twenty miles by sun-up. I been prospectin' out here more'n thirty years," he complained. "All I swear to God more'n nineteen years was spent trackin' loose burros. What you want with me?"

"Come inside, said Dustin. 'Nice names you got for 'em.' 'Nice names you mean them asses. They've earned 'em. Now you take that you Baptist. He'll run belly-deep into the fat puddle he finds an' all he'll get out'n him out'n Presbyterian! Let the roughest trail be his find and shoulder the other asses into it. No matter where it takes 'em to as long as they take his trail."

He stepped talking as Dustin came back with a bottle and glasses and his shrewd eyes watched the ranchman pouring. Kane was a "desert man," he said. He was no fool. He was fairly sure that Sam Dustin was never civil without just cause. He drained the tumbler at a gulp.

"I be damned glad you had the guts to grubstake me this time, Dustin," he said. "I got news for you."

It was the first time in his life that he had ever called Dustin by his last name without any prefix and both partners sensed that it had its meaning. They both eyed Kane. Could the old fool be drunk on just one hastily swallowed drink? It was not likely. They could not know that the old prospector, who had spent a lifetime trailing will-o'-the-wisps across a continent, was intoxicated with the headiest wine in the world.

"Success! He thrust a gauged old hand into his tattered shirt and fumbled there.

"'Berchins! yourself or what?' asked Goddard.

"'Mostly what,'" said Kane grimly. "You listen to me. . . . His voice rose shrilly as men who would force belief.

"'For more'n a lifetime I been trackin' 'n' trailin' across them ranges. . . . His knotted finger shot out toward the distant range of the Windy.

"'I've done scratched gravel from Alaska to Fehantepec. There ain't a county between hell an' high water here I ain't been and I've got 'em more desert dust'n the Lord used in creatin' man. . . ."

"Come to the point," said Dustin shortly. "Right here says I've been a fool ever to have grub-staked you. What's bit'n you? What've you got this time? Need more of a grub-stake to tide you over till the Christmas time?"

"Will you stand another stake if I need it?" demanded Kane. He felt he knew both men and he knew well that his few finds had not paid his grub-stake bills. He did not really like a single bone in Sam Dustin's big body but after all . . . Dustin

## HOLDS FALSE TEETH TIGHT AS CEMENT

Plates can't possibly slip when you prick 'em in Dr. Werners' False Teeth. They actually feel and act like your own. Keep mouth sanitary, breath pleasant, social confidence—these sensitive gums from getting sore, small cost—any druggist.

had stalked him when no one else would.

"You mean you'll stand another stake if I need it?" he asked.

Both men eyed him. Old Kane might have concealed bad luck. He did it frequently. Good luck never! He must have some good news.

"Sure will stake you again," said Dustin quickly. "A man can't expect to win always. You've made one or two nice hauls. Dad. Better luck next time."

Dad Kane, desert rat, luckless prospector till now, gray and very wise Ulysses in Frontier lore, was taken in. He thought they meant it. These were partners worth having! How he had misjudged them! His eyes bled into Dustin's.

"You're never days guttin' back!" he said. "I was up in the Bent Wood hills. . . ."

Dustin's eyes contracted a little, poorly beneath the glare.

"We're partners in all my prospectin'," said Kane sharply. "But by God, I'm not sharin' in what I seen your men doin' up there."

"What in hell do you mean, you damned old . . .," began Dustin. But Spike Goddard waved him into silence.

"Wait a bit . . . Spike's eyes narrowed and his voice softened. 'Go on Kane. What do you mean?'

"Mean? You know damned well what I mean. I ain't no cattle man but I know what it means when I find two Broken Spur men's champion brands on Hour-glass cattle. Usin' runnin'-irons on cattle on a fenced range that's after that, they cut the fences an' piled tumble-weed along the wire to look like an old break 'n' . . ."

"You're lazy, man! . . . I tell you . . ."

"I ain't afraid I seen 'em no trouble. Most of all I do want to have trouble with the Hour-glass people. I got me a good reason, too. You and me are partners in prospectin' but I tell you plain that if your men ain't catchin' off old Kane Joe Carr's cattle, I'll not split with you no . . . I'll go to him an' . . ."

"I tell you I seen 'em," he said. "It wasn't no small party. Just maverick's fine calves like he said a right to do. I see Gray an' Apples and Corne. They had a wagon in the boiler an' they had a fire pot an' a nigger heatin' the irons. They got no sense no way. They might know that they had a fire pot for the fire'd be shootin' out what they doin'. On legitimate business they'd have had dry wood in the corner under the wagon. You call off your dogs till I git down with my business with the Hour-glass. If you don't, you'll be sorry. I ain't got to be tricked up in no cattle war of my own life."

A breathless silence held both partners. For just a fraction of a second Spike Goddard's eyes held his partner's gaze. Then he winked. Dustin at once took the cue. He was mentally quicker than Spike.

"Damn those fools," he said quickly. "If they've been up to any game like that, we'll sure see 'em. I give 'em the wagon and a few days off to hunt in the Hills. God knows we don't need Hour-glass cattle."

"See don't need 'em now," said Kane curly. "For more'n three years I've heard men say that if the Broken Spur ranch on most sides ain't cut down I'd strip to a Hour-glass. They change awful easy. You all don't need to that from now on I tell you to look here . . ."

His outflung hand threw a skin bag to the table where it hit the board with a dull rattling click.

"I've done . . ."

"I've done . . ."

"I've done . . ."

"I've done . . ."

"I've done . . ."

"I've done . . ."

"I've done . . ."

"I've done . . ."

"I've done . . ."

"I've done . . ."

"I've done . . ."

"I've done . . ."

"I've done . . ."

"I've done . . ."

Dustin pounced on it like a cat on a mouse and fairly snatched it open with teeth and fingers as Kane talked.

"I'll need a couple o' men to help me for a few days but I'm thinkin' that when word gets out of what I've found, there'll sure be a stampede like the Tonopah days. In the meantime I need powder an' fuses an' dynamite an' drills. Mine are all worn down to the roots so to speak. I need a new pick and some beddies. . . ."

"I need a new pick and some beddies. . . ."

"I need a new pick and some beddies. . . ."

"I need a new pick and some beddies. . . ."

LESS THAN  
1¢ WORTH  
IN A  
CAKE

It actually takes less than 1¢ worth of Magic Baking Powder to make a cake, and you can count on good results—every time! No wonder Canada's cookery experts say it doesn't pay to take chances with inferior baking powder. Bake with Magic and be sure!

**MAGIC**  
MADE IN CANADA

"CONTAINS NO ALUMINUM!" This statement on every tin of your guarantee that Magic Baking Powder is free from alum or any harmful ingredient.

## Alberta Pool

Makes Three Annual Payment on 1929 Guarantee

The Alberta Treasury is \$453,425 richer, representing the third annual payment from the Alberta Wheat Pool on its 1929 crop overpayment guarantee.

The payment was made from central headquarters in Calgary and announced by R. D. Purdy, manager.

The guarantee on the 1929 was in excess of \$5,000,000. It was reported when the agreement was reached between the government and the pool.

Delivers Bread By Boat

W. Belbin, the "Bread Boatman," has just completed his 43rd year of delivering bread on the Lower Clarence river at Maclean, New South Wales. In travelling his daily round he has covered between 600,000 and 700,000 miles—without an accident. Most of his rounds were done in a rowing boat, but the last few years he has used a motor boat.

Upward of 12,000,000 in Great Britain are insured against unemployment, and 17,000,000 against sickness, maternity, invalidism, and old age.

## Smarter Tie For Sailors

New Pattern Being Issued For

The black silk handkerchief, or scarf, for many generations a distinguishing feature of the British Royal uniform, is to be oblong instead of square, state admiralty fleet orders.

Since the latter part of the eighteenth century, the scarf, always 36 inches square, has been tied with a knot to meet the point of the sailor's collar. The new size will be 36 inches by 24 inches.

A naval officer said that, after a little wear, the square handkerchief when fastened into the collar is not long enough to make a neat knot. Issues of the new pattern will begin at once.

## Here's Way Science Now Relieves Pain in Minutes

BAD HEADACHES, NEURITIS AND RHEUMATIC PAINS—EASED ALMOST AT ONCE

Remember the pictures below when you want fast relief from pain. Aspirin eases even a bad headache or neuritis often in a few minutes. An Aspirin tablet begins "taking hold" of your pain practically as soon as you swallow it. And Aspirin is safe. For Aspirin does not harm heart.

Remember these two points: Aspirin Speed and Aspirin Safety. And, see that you get *ASPIRIN*, the refined doctors prescribe. It is made in Canada, and all druggists have it. Look for the name Bayer in the form of a cross on every Aspirin tablet. Get 12 or 24 tablets or economical bottles of 24 or 100 tablets.

IN 2 SECONDS BY STOP WATCH  
An Aspirin tablet starts to disintegrate and go to work.

What happens in those 2 seconds? Aspirin starts "taking hold" of your pain practically as soon as you swallow it. And Aspirin is safe. For Aspirin does not harm heart.

## When in Pain Remember These Pictures

—ASPIRIN DOES NOT HARM THE HEART—

## THE RHYMING OPTIMIST

By Aline Michaels

## THE SAINT

His tattered hat, his ragged coat; What to the saint do these denote? The lanky rook above his head, His scanty share of mud and bread, His low estate, unknown, unpriced— His give him pain were these things said? The saint goes by and never knows How through his body the chill wind blows.

Though men may smile and men may sneer, He dwells in Heaven now and here!

More than 11,000 Jewish refugees fled from their homes in Germany to Palestine in the nine months following April 1, 1933.

It has been estimated that the temperature of the interior of the sun is not more than 50,000,000 degrees Fahrenheit.

In proportion to their place, a fly walks about 35 times as fast as a man.

The American school savings bank system now operates in 15,000 schools.

W. N. U. 2066

It flushes off stains without harming enamel or plumbing . . .

HOW to get rid of those ugly toilet-bowl stains? It's easy—with Gillett's Pure Flake Lye. Once a week pour this powerful cleanser and disinfectant—full strength—down toilet bowls and drains. It flushes off stains without scrubbing. Cannot harm enamel or plumbing. Kills germs and destroys all odors as it cleans!

There's no need to slave over unpleasant cleaning jobs. Let Gillett's Lye work for you—it's quick, thorough and absolutely dependable. Ask your grocer for a tin—today.

Never dissolve lye in hot water. The action of the hot liquid breaks the water.

**FREE BOOKLET**—Send for new revised edition of the Gillett's Lye Booklet. Gives full directions for cleaning sink drains and toilet bowls. Tells how to shorten dozens of other cleaning tasks. Also contains full directions for soap making, thorough cleaning, and other uses on the farm. Write to Standard Brands Limited, Fraser Avenue and Liberty Street, Toronto, Ontario.

**GILLETT'S LYE EATS DIRT**

Praises Canada

Mr William Clark, High Commissioner, Returns To England

Mr William Clark, high commissioner for the United Kingdom at Ottawa for many years, returned to England, referring in glowing terms to his experiences in Canada.

Mr William is taking the British high commissionership in the Union of South Africa after six years in Canada. He declared that all his work there had been "immensely helped by the kindness and generosity" of the prime ministers and their term of office, W. L. Mackenzie King and Prime Minister R. B. Bennett.

## Keep "Leftovers" Fresh and Tasty

You know how deliciously fresh washed paper keeps sandwiches. "Parasani" keeps them just as fresh. It will do the same for cut meats and other things. The "Parasani" remains at the end of the meal. "Parasani" enables you to serve these leftovers again, knowing that they still possess their appetizing flavor and freshness.

"Parasani" comes in a handy roll, just tear off what you need. Fold the sharp edge of the box. For less exciting uses, "Parasani" makes a very popular paper.

Your druggist or grocer or stationer has them both.

Thursday, Oct. 19th, 1934

Liberal Convention tomorrow  
afternoon; Concert and Dance  
at night.

Earl Saunders left on Friday  
for the East with a carload of  
horses.

T. Rowles, sr., left for Saska-  
toon on Monday; Mrs. Rowles  
had preceded him there.

A party of local hunters shot  
twenty-eight geese on Satur-  
day. A larger party of hunters  
exceeded this number on a  
hunting trip Monday.

Fred Wheeler, Miss H. Turn-  
er and John Turner, were  
visitors in town this week.  
It is reported that Mr. Wheeler  
is to commence in the bakery  
business here.

Call on the Empress Express  
for Personal and Autograph  
Christmas Cards. We are also  
offering one dozen cards, either  
Personal or Autograph, free  
with a year's subscription to  
this paper.

Come to St. Mary's W.A.  
Bazaar, Tea and Sale of Home  
ing, on Saturday, October 27,  
Cooking at the Municipal Hall,  
at 5 p.m.

Dave Lush was around today  
making out the districts left for  
this district, under the new  
Dominion franchise Act.

Mr. and Mrs. Wilkinson, left  
on Tuesday morning for Medi-  
Hat; they have been residing  
in the house owned by Mrs. Hero,  
sr.

Rev. and Mrs. J. S. Parks,  
L. Hanna and Geo. Durk, jr.,  
who have been attending the  
Conference of the Synod of the  
Anglican Church at Regina  
Sask., arrived back on Monday  
night.

## The Wheat Yield

While it is difficult, owing to  
the great volume of threshing  
still to be done, to arrive at  
accurate estimates of the yield  
of wheat, it is fairly certain  
that the total yield will be  
greater than was obtained in  
1933. The provincial depart-

ment of agriculture is of the  
opinion, subject to revision  
when threshing returns are  
more complete, that the aver-  
age yield of wheat over the  
province will prove to be be-  
tween 14 and 15 bushels per  
acre over the seeded area of  
7,501,000 acres, giving a total  
production of between 108,000,  
000 and 112,000,000 bushels,  
which is compared with the  
unrevised estimate of the 1933  
crop of 104,000,000 bushels or  
a provincial average of 12 bush-  
els. Inspections of wheat for this  
season from August 15th to  
Sept. 30th, that Calgary and  
Edmonton have totalled 7,672  
ears, compared with 6,744 ears  
for the same period of 1933.  
The heavy increase this year  
for the period has been at Cal-  
gary, where 5,215 ears had been  
inspected compared with 3,474  
ears last year at this time. At  
Edmonton the decrease was  
from 3,179 ears in 1933 to 2,457  
ears this season to September  
30th. Grading showed 80.3 per  
cent. of inspections at Calgary  
to be No. 2 or better, which is  
about the same as last year,  
while the drop in grade at Ed-  
monton thus far has been from  
91.1 per cent. No. 2 or better in  
1933 to 72.2 per cent. this year.

OPEN WINDOWS

"Night air is bad air, and  
therefore, you should keep your  
windows closed at night" was  
the general belief until just a  
few years ago. It was not until  
the beginning of this century  
that the value of fresh air was  
first taught as part of the cam-  
paign launched against tuber-  
culosis at that time.

Many people still seem to be  
afraid of fresh air; they still  
apparently hold to the old be-  
lief that night air is different  
from day air and is, in conse-  
quence, injurious. At least, it  
seems fair to believe that this  
is their opinion when we learn,  
from an article in a recent issue  
of the Canadian Public Health  
Journal, that a study of the  
habits of over two thousand  
school children showed that  
over twenty five per cent. of  
these children slept in rooms  
with closed windows.

It is important to know that  
the study revealed no apprecia-  
ble difference between girls and  
boys, but that the older child-  
ren had a better record than  
the younger. It might be ex-

pected that there would be a  
marked difference between  
children according to the in-  
comes of their homes. It would  
seem a natural explanation  
that it is more where there was  
difficulty in finding the where-  
withal to keep warm, there  
would be less likelihood of open  
bedroom windows at night.  
Strange to say, there was prac-  
tically no difference as regards  
income levels, so apparently the  
bedroom windows of the well-  
to-do are as frequently kept  
closed as those of their econom-  
ically less fortunate neighbors.

This study is of particular in-  
terest to all who are interested  
in health, and especially so for  
those who have been teaching  
health habits in their own homes  
or in a wider field. At first, it  
may appear to be surprising  
and disappointing that such a  
large proportion of a group of  
school children should be de-  
prived of fresh air which is  
free and to be had for the taking.  
Those who recall condi-  
tions as they were thirty years  
ago, when not only were win-  
dows kept closed, but all cracks  
and crevices were carefully  
stuffed against the cold wind  
of incoming air, will wonder  
not that twenty-five per cent.  
still keep their windows closed,  
but that in these comparatively  
few years, seventy-five per cent.  
have learned to leave their bed-  
room windows open at night.

Are you one of the minority  
clinging to the old beliefs and  
fears, or have you joined the  
enlightened majority who se-  
cure for themselves homes in  
the fresh air while they sleep?

## Obsoluscent Debts

Debts net of their own mak-  
ing—obsolescent debts—hang  
heavy about the necks of the  
Last Generation.

Half of America lives at the  
poverty level and cannot afford  
to carry any debt whatever.

You are doomed if you as-  
sume the debts of the older  
generation. People ought to  
pay as they go.

The issue boils down to this:  
either some creditor of the old-  
er generation must take a heavy  
loss, or else you must spend  
years grinding away to pay off  
debts you never incurred.

The Empress Express

The hunting season is  
here. In Canada the  
game is in the air and  
the maples, like the  
gold against the dark, friendly  
background that one can see  
and gold, hold high corners.  
The woods are at their best—  
honest and black, the look  
deer has his horns burred to his  
fancy, the coat of the black bear  
shines like silk and the lustrous  
robe of the grouse is a study in

dark and grey. The big-horn sheep  
is restless and alert, the mountain  
goat snow white and the caribou in  
the prime. The grouse and woodcock  
are plump and contented in the  
coverts, while the ducks and geese  
are gathering in favourite feeding  
grounds in preparation for their  
long flight south.  
The game areas of Canada,  
scattered from ocean to ocean,  
are readily accessible from any part  
of the continent. It is not a country  
for the wealthy sportsman only,  
the hunter with moderate means

may also be suited. Local residents  
can enjoy a trip at a very reasonable  
cost. Sportsmen from other lands  
are welcome and are only asked to  
show their appreciation of the privi-  
lege of access to our game fields  
by obeying the hunting laws and  
observing the ethics of sportsmanship.  
A publication entitled "Canada's  
Game Fields" which should be of  
interest to sportsmen planning a  
hunting trip in Canada may now  
be had upon application to the  
National Parks of Canada, Depart-  
ment of the Interior, Ottawa.

More rights higher than the  
rights of money. Neither  
the reckless spender, nor his  
creditor, has the slightest right,  
legal or moral, to transfer the  
obligation to somebody who  
was a babe in arms at the time  
when the debt was created.—  
Walter B. Pitkin, U.S. Socio-  
logist and Author in his new  
book, "The Chance of a Life-  
time."

The Crop Season—cont.  
and the prolonged period of  
bad weather set in, cutting was  
practically completed through-  
out the province save a few  
fields in the north. The cold  
weather, which lasted almost  
three weeks and delayed thresh-  
ing in all parts, brought heavy  
falls of snow to nearly all dis-  
tricts, which alternated with  
rains and heavy frosts. Snow  
fell heaviest throughout the  
districts south of Calgary and  
temperatures fell on one  
occasion in these districts to as  
low as 25 degrees of frost at  
Edmonton, and to a low of  
five below zero in the mountain  
districts. In central and north-  
ern districts frost to the ex-  
tent of ten to eighteen de-  
grees was registered on dif-  
ferent dates. This weather

served to reduce yields and  
quality of the grain remaining  
unthreshed. In the Peace River  
districts no threshing had been  
done when the bad weather  
arrived and some 20 p.e. of the  
cutting also remained to be  
done. Consequently some dam-  
age was caused in those dis-  
tricts.
